A;Description: receptor for interleukin-2
A;Pathway: interleukin-2 stimulated growth and differentiation of T cell
C;Superfamily: interleukin-2 receptor gamma chain
C;Keywords: cytokine receptor; duplication; glycoprotein; transmembrane
F;1-22/Domain: signal sequence #status predicted <STG>
F;23-369/Product: interleukin-2 receptor gamma chain #status predicted <
F;256-284/Domain: transmembrane #status predicted <TMM>
F;71,75,84,96,159,164,306/Binding site: carbohydrate (Asn) (covalent) #s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gene 130, 303-304, 1993
